Pred: No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

```
which are involved in the lignin biosynthetic pathway. The polynucleotides can be used for modulating lignin content, lignin composition and the structure of a plant, especially eucalyptus and pine species, and for modifying the activity of an enzyme involved in lignin biosynthetic pathway, and for producing a plant having altered lignin content, composition and structure. They can be used for designing probes and primers useful for detecting similar DNA and RNA sequences in any organism and for PCR amplification. The lignin content can be efficiently modified using the polynucleotides. AAA67908 to AAA68201 and AAB16341 to AAB16449 represent polynucleotide and protein sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        caffeic acid methyl transferase, caffeoyl CoA methyl transferase, coumerate CoA ligase, cytochrome p450 LXXLA, diphenol oxidase, flavanol glucosyl transferase, flavanola hydroxylase, and isoflavone reductase, which are involved in the lignin biosynthetic pathway. The polynucleotides can be used for modulating lignin content, lignin composition and the structure of a plant, especially eucalyptus and pine species, and for modifying the activity of an enzyme involved in lignin biosynthetic pathway, and for producing a plant having altered lignin content, composition and structure. They can be used for designing probes and primers useful for detecting similar DNA and RNA sequences in any organism and for PCR amplification. The lignin content can be efficiently modified using the polynucleotides. AAA67908 to AAA68201 and AAB16341 to AAA6840 represent polynucleotide and protein sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                           (GENE-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 512
                                                                                                                                                                                 WPI;
The present invention describes isolated polynucleotides and proteins encoding and representing the enzymes cinnamate 4-hydroxylase (C4H), commarate 3-hydroxylase (C3H), phenolase (PNL), O-methyl transferase (OMT), cinnamyl alcohol dehydrogenase (CAD), cinnamoyl-CoA reductase
                                                                                                                    Novel polynucleotide encoding enzymes involved pathway useful for producing transgenic plants and pine species having altered lignin content,
                                                                                                                                                                                                             Bloksberg

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC (CCR), phenylalanine ammonia-lyase (PAL), 4-coumarate:CoA ligase (4CL), CC coniferol glucosyl transferase (CGT), coniferin beta-glucosidase (CBG), CC laccase, peroxidase, ferulate-5-hydroxylase (FSH), alpha-amylase, CC caffeic acid methyl transferase, caffeoyl CoA methyl transferase, CC coumerate COA ligase, cytochrome P450 LXXIA, diphenol cxidase, flavanol CC glucosyl transferase, flavenoid hydroxylase, and isoflavone reductase, CC which are involved in the lignin biosynthetic pathway. The CC polynucleotides can be used for modulating lignin content, lignin CC composition and the structure of a plant, especially eucalyptus and pine CC composition and the structure of a plant, especially eucalyptus and pine CC content, composition and structure. They an be used for designing probes CC and primers useful for detecting similar DNA and RNA sequences in any CC corganism and for PCR amplification. The lignin content can be efficiently CC content, composition and structure. They can be used for designing probes CC and primers useful for detecting similar DNA and RNA sequences in any CC corganism and for PCR amplification. The lignin content can be efficiently CC content composition of the present polynucleotides and protein sequences used in the CC exemplification of the present invention.

The gene is useful for the development of a plant highly resistant against active oxygen which is formed under various environmental stress conditions. This sequence represents a peroxidar related DNA fragment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAT66687;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAT66687 standard; cDNA; 1167
                      cDNA clones (AAT66684-87) respectively code for soybean peroxidases SEPal, SEPal, SEPbl and SEPb2 (AAM16607-10). Plant peroxidase specific primer PSF (AAM166079) was generated from the conserved distal haem ligand (AAW16603) in all plant peroxidases, and was used to generate a peroxidase gene probe. Primary hybridisation screening using the probe yielded 25 clones. Il positive clones were recovered after 2 rounds of PCR using PSP and a T7 vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Glycine max cv.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAV81423
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               analysed. The soybean peroxidase genes can be used to develop products for the quantification and monitoring of peroxidase activity, e.g. in assays such as ELISA, PCR, plant breeding programmes, pulp and paper bleaching, on-site waste destruction, soil remediation and organic synthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1167 BP; 385 A; 232
This cDNA clone codes for novel soybean peroxidase SEPb2 (see AAW67734). 4 Clones, designated SEPa1, SEPa2, SEPb1 and SEPb2 (see AAV81420-23) were isolated from a soybean cv. Resnick seedling cDNA library using a plant peroxidase specific primer (see AAV81424) and 3'RACE. Genomic clones (see AAV81418-19) for SEPa1 and SEPb1 were also obtained. The coding regions of SEPa1 and SEPa2 exhibit 97%
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            12-APR-1999

The peroxidases are useful in pul and paper bleaching, on site waste destruction, soil remediation, organic synthesis and diagnostic chemistries. Soybean peroxidase has advantages over chlorine bleach, being cheaper, more environmentally friendly, and producing hydroxyl ions with twice the oxidising power of chlorine ions. The plant enzyme is cheap and easy to produce. The invention also relates to immunoassays
                                                                             Vierling

                   This invention relates to a peroxidase derived from a Paraquat callus. Included in the invention are the gene encoding the per a vector containing the gene, and a method for the preparation peroxidase. The gene is useful for the development of a plant h resistant against active oxygen which is formed under various environmental stress conditions. The present sequence represent

The invention provides four cDNA sequences (AAV69273 to AAV69276) encoding soybean peroxidases SEPa1, SEPa2, SEPb1 and SEPb2 (AAW81493 to AAW81496) respectively. An expression vector containing the SEPa1 cDNA sequence can be used to transform host cells for the recombinant production of the peroxidase. The peroxidase is useful in industries and diagnostic

Included in the invention are the gene encoding the peroxidase, a vector containing the gene, and a method for the preparation of the peroxidase. The gene is useful for the development of a plant highly resistant against active oxygen which is formed under various environmental stress conditions. This sequence represents a PER4 peroxidase related cDNA.

The present invention describes isolated polynucleotides and proteins ce encoding and representing the enzymes cinnamate 4-hydroxylase (C4H), coumarate 3-hydroxylase (C3H), phenolase (PNL), O-methyl transferase CC (CCR), phenylalanine ammonia-lyase (PAL), cinnamyl alcohol dehydrogenase (PAL), cinnamyl-CoA reductase. CC (CCR), phenylalanine ammonia-lyase (PAL), 4-coumarate:COA ligase (4CL), CC coniferol glucosyl transferase (CGT), coniferin beta-glucosidase (CBG), CC laccase, peroxidase, ferulate-5-hydroxylase (FSH), alpha-amylase, CC commerate COA ligase, cytochrome P450 LXXIA, diphenol oxidase, flavanol CC glucosyl transferase, flavenold hydroxylase, and isoflavone reductase, CC which are involved in the lignin biosynthetic pathway. The CC composition and the structure of a plant, especially eucalyptus and pine CC species, and for modifying the activity of an enzyme involved in lignin CC content, composition and structure of a plant, especially eucalyptus and pine CC species, and for modifying the activity of an enzyme involved in lignin CC content, composition and structure. They can be used for designing probes and primers useful for detecting similar DNA and RNA sequences in any CC content, composition and structure. They can be used for designing probes cand primers useful for detecting similar DNA and RNA sequences in any CC content, composition and structure. They can be used for designing probes and primers useful for detecting similar DNA and RNA sequences in any CC content can be efficiently conten
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel polynucleotide encoding enzymes involved in lignin-biosynthetic pathway useful for producing transgenic plants especially eucalyptus and pine species having altered lignin content, composition and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Plant; lignin; lignin biosynthetic pathway; Eucalyptus. Pinus radiata; Monterey pine; ds.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ,

Sequence 8092, Application US/09878574

Patent No. US20020110548A1

GENERAL INCOMMATION

APPLICANT: Byrum, Joseph R.

APPLICANT: Byrum, Joseph R.

APPLICANT: Thompson, Michael D.

FILE OF INVENTION: Nucleic Acid Molecules and Other Molecules Associated with

FITLE OF INVENTION: Plants

FILE REFERENCE: 38-21(15401)8

CURRENT APPLICATION UNMBER: US/09/878,574

CURRENT APPLICATION NUMBER: 09/333,535

PRIOR APPLICATION NUMBER: 09/333,535

PRIOR PILING DATE: 1999-06-14

INUMBER OF SEQ ID NOS: 15775

SEQ ID NO 8092

LENGTH: 285

TYPE: DNA

ORGANISM: Glycine max

OTHER INFORMATION: Clone ID: 70110073991
                                                                                                                                                Percent Similarity:
